We have a new interior jamb available, we have named this interior jamb option Quietjamb. As you can see from the picture below the jamb comes with a small flexible bulb type weatherstrip to keep room, door slamming, kid and other noises to a minimum. This is an available option on all interior doors. The door will arrive at the jobsite with the bulb already installed, it is available in beige as shown or bronze.

This picture also shows the stop being held in by a vinyl barb. This barb stop installation is good for stain grade jobs since it eliminates nail holes in the stop.

We also will apply the stop by the traditional pin nail method. The pin nail method is sometimes preferred since it will allow for the finish installer to move the stops around in the field.

### QUIETJAMB

During these tough times we are continually working on improving our product offerings. We have added quite a few new door and window displays to our showroom. We now have around 135 doors on display. We have also added two new wood window lines Eagle and Semco. Eagle is compelling in that it offers 52 exterior colors, 8 interior wood species, pull down screens and mini blinds between the glass. But that is a topic for another day.

As always we work hard to earn your business and thanks for your continued support.
